Product Description

Arena Werks: Original 7ft Circular Harrow

The **Original Arena Werks** *arena drag* levels, flattens, breaks up dirt clods, no corners to hook fence posts. Available in 5', 6', 7', & 8' models. Custom sizes also available. Welded or replaceable teeth. Drags also available with 10 arms and/or 1" teeth to add weight and make it more aggressive.

The circular motion of the rotary harrow takes the high spots of dirt spins them around and deposits them in the low spots. The arena drag will grab the dirt that gets thrown up against the rail around the arena fence and throw it back into the middle. Our Arena Harrows also work well with rubber footing, pin bark mulch or the various other footings out there.

The Arena Werks harrows are used in orchards, baseball diamonds, landscaping, and chicken houses. The circular motion of the Arena Werks will leave a smooth base with no ruts underneath the surface, therefore giving you the best possible footing for today's competitive horses.
